## Wizard v3 Wizard PRO v3

2300 LED lumens • 130 meters

### 2 versions: Pro and Regular

Pro – constant light brightness, advanced operation, color indication and a removable magnet in a tailcap for fixation on iron surfaces. Regular version is notable for easier operation.

### Extreme light brightness 2300 LED lumens (PRO)

The use of unique electronics enabled us to create the world's first headlamp with 2300 LED lumen brightness, which remains constant during the whole operation time of the flashlight.

### Light-weight and durable body

Ultra strong body – the flashlight easily stands up to fallings, impacts and vibrations. Solid body without long wires, weak rubber connectors and unnecessary boxes. It means that you can use it in various situations without a risk to drop it, scratch or catch on the bushes.

### Perfect combination of width and beam distance

The most efficient TIR-optics provides even wide light at the distance up to 130 meters and perfectly suits either for close application or a huge area illumination. Continuous use without an effect of «tunnel vision».

### Reliable mount and comfortable operation

Comfortable headband for reliable fixation of the flashlight – it won't slip even while you're running. Side switch and the function of quick access to the main modes guarantees a simple one-hand operation. The flashlight won't shift or slide down from the head.

## Tiara v2 Tiara PRO v2

600 LED lumens • 86 meters

### 2 versions: Pro and Regular

Pro – constant light brightness, advanced operation, color indication and a removable magnet in a tailcap for fixation on iron surfaces. Regular version is notable for easier operation.

### Incredible brightness for the flashlights of such size

Effective electronics enables to get unbelievable 600 LED lumen brightness running only on one power source, saving compact sizes of the flashlight. Tiara A1 – the brightest headlamp on the most widespread AA battery, Tiara C1 – the smallest headlamp on CR123A battery.

### Well thought-out body ergonomics and reliable mount

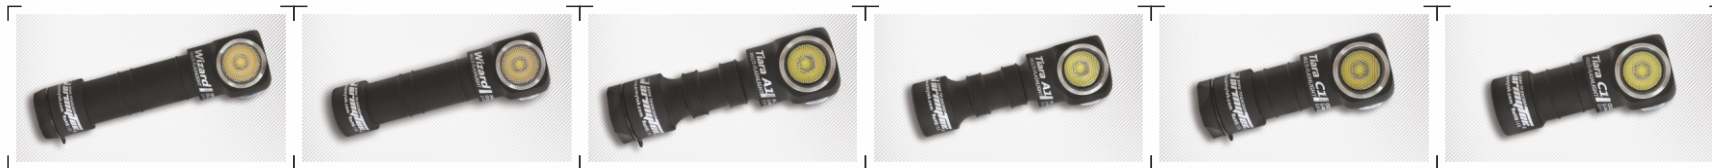

Solid body without long wires, weak rubber connectors and unnecessary boxes provides fail-safe flashlight operation even in extreme conditions. Comfortable headband for reliable fixation on the head and convenient continuous usage.

### Wide flood light 70:120

Effective TIR-optics with wide light angle 70:120 for even area illumination at the distance up to 86 meters and no effect of «tunnel vision» even during continuous use of the flashlight.

### Easy operation by side switch

Side switch on the head for quick and easy one-hand operation, without shifting the flashlight in the headband.
